

Clinical & Simulation Scheduler— Audit Tracking

One-page summary for program staff and faculty

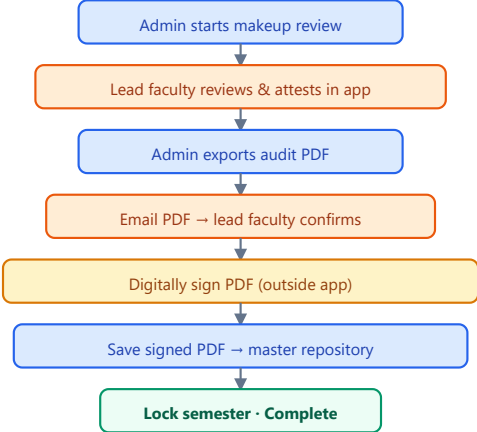

Overview:

Scheduling and tracking app for clinical and simulation hours. Planned scope will support all courses in the ADN program. App can auto schedule students based on clinical/simulation contact hour requirements, and allows for changing clinical requirements in the advanced configuration settings within the app. Faculty can also use the autoscheduling feature to find and schedule makeup days for students when they are absent. At the end of the semester, the app will generate a PDF of report of the semester documenting all student hours. Faculty and admin will then e-sign the PDF and save it to the master repository folder for audit purposes.

Setup phase (before semester)

End-of-semester closeout

Wrong PDF? Fix app -> re-export v2 -> re-sign
Lead faculty signs first, then admin (typical)

Key roles & folders

Program engineer (Robin)

Course templates, facilities, hour requirements, content tags (once per program revision)

Administrative staff

Setup, export audit PDF, lock semester, file signed PDF · Edit on Working + Audit-Records folders

Lead course faculty

One person per course · Schedule student makeup days · End-of-semester makeup attestation & PDF sign-off

Working folder

Live semester files (e.g. F2026_REGN15P.json) — shared while term is active

Master repository

Signed audit PDFs only (e.g. Fall-2026-REGN15P-Audit-v1.pdf) — official clinical-hours record
